What is the problem with plastic?

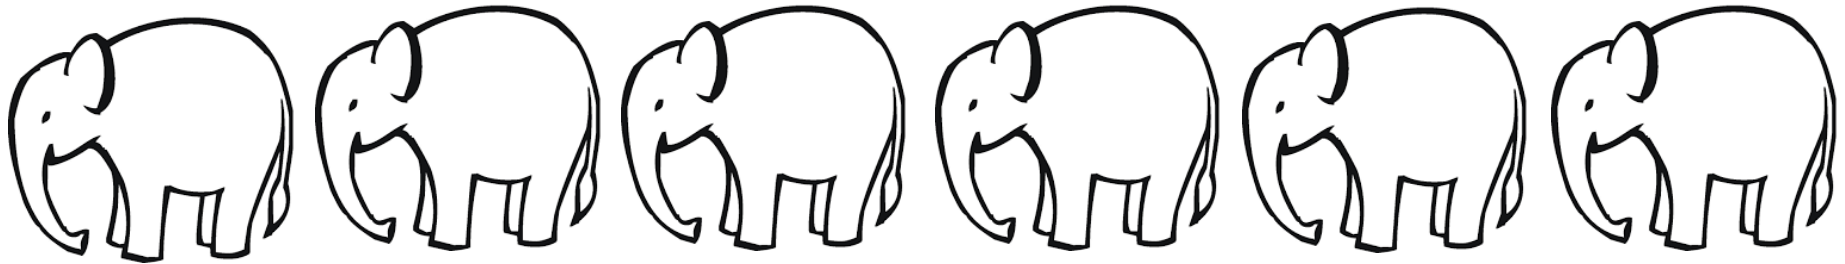

We did our own research to find out about the catastrophic effect plastic waste is having on our environment.

The problem with plastic is that most of it isn't biodegradable. It doesn't rot, like paper or food, so instead it can hang around in the environment for hundreds of years

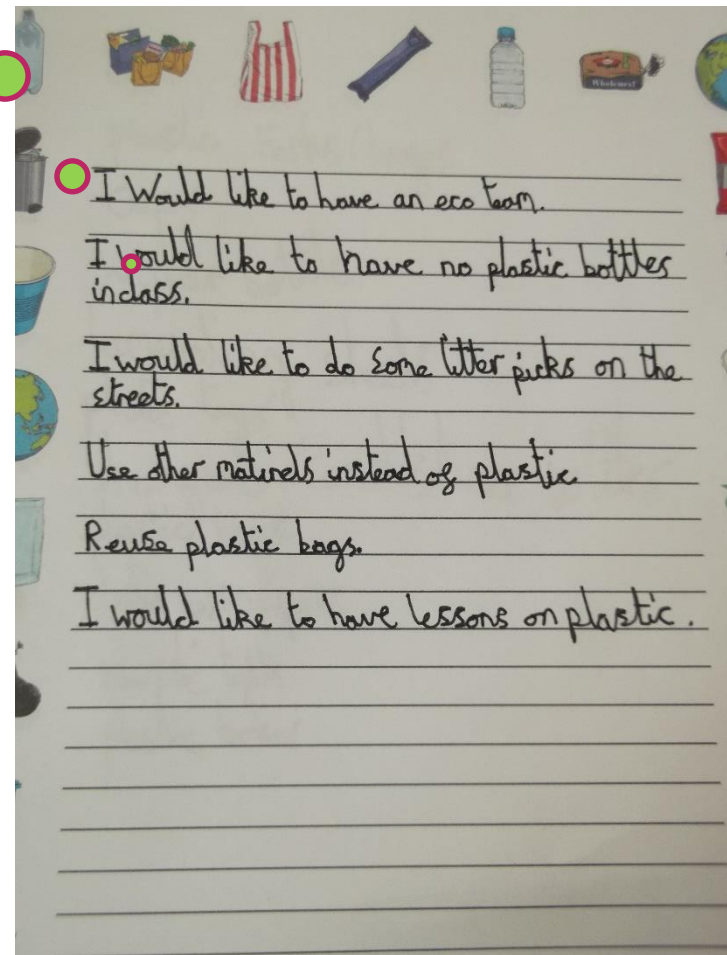

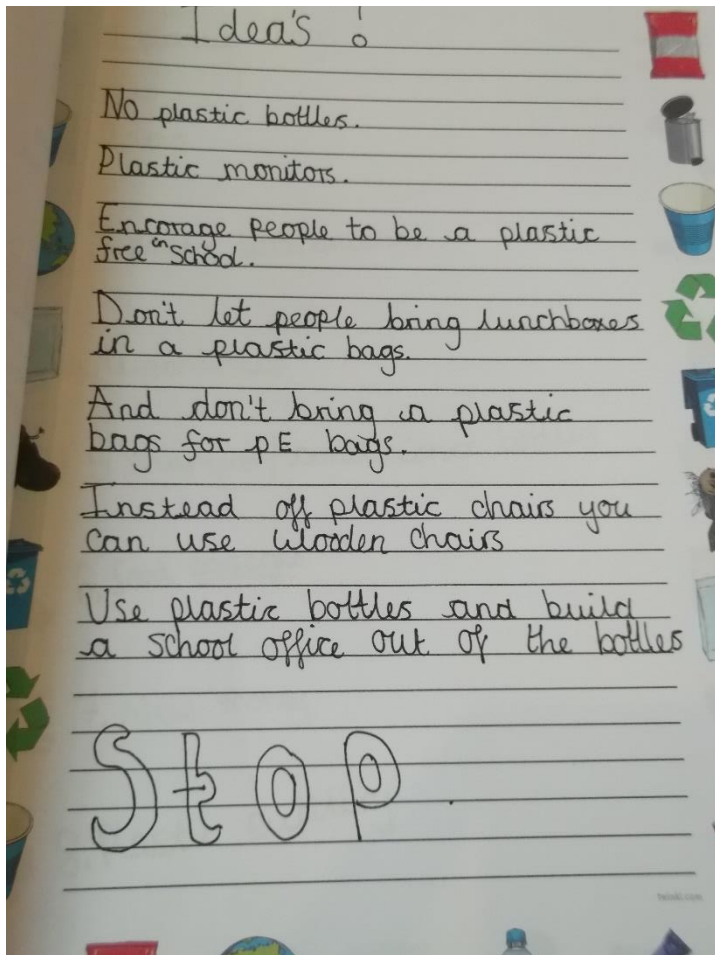

If all the plastic humans made every year was weighed in elephants, there would be 30 million of them, and would stretch around our planet more than five times.

We wish to reduce the use of plastic in our schools by:

Here is our suggestion to our School Councils and our Head Teachers:

- We would like there to be a ban of children bringing plastic bottles to school. Every child should have their own water bottle
- We would like there to be a ban of parents using plastic food bags in lunch boxes. Instead, they should use paper bags or foil to wrap food
